

METHOD FOR PROVIDING PROGRAMMING DISTRIBUTION

ABSTRACT OF THE DISCLOSURE

A method and apparatus are provided for distributing programming. A first
5 set of program segments is transmitted according to a schedule of programming. A second
set of program segments is stored on a server, with at least one of the first set of program
segments having a counterpart in the second set of program segments. A database is
maintained that records user authorizations to program segments on the server. A request
from a user for program control of a particular program segment is detected and a
10 determination is made whether to grant program control to the user.
